

Cal OES Daily Situation Report

May 30, 2017

Even with warming temperatures throughout the state, record precipitation this past winter has left mountain passes covered with snow

SITUATION SUMMARY

2017 Statewide Winter Storms

Cal OES Coastal Region

Paul's Slide, State Route 1, Monterey County

Per Cal OES Coastal Duty Officer (CDO), as of 1300 hours on 05/25/17, Paul's Slide on State Route 1 has been closed to all traffic.

- Caltrans engineers report slide activity and the area has been closed in the interest of public safety.
- Assessment will commence and further details will be provided once released.
- All deliveries and local access previously scheduled have been suspended.

Mud Creek Slide, State Route 1, Monterey County

The Mud Creek area on State Route 1 sustained a major slide on the evening of 05/20/17, when over a million tons of rock and dirt fell down the slope continuing down to the ocean floor 250 feet off the shoreline.

- The Mud Creek area is ¼ mile in length, made up of five slides, four of which fell during this single incident and consolidated into one slide. The remaining slide now extends 1,500 feet in length over State Route 1 and is about 35 to 40 feet deep.
- Roadwork at Mud Creek was suspended and heavy equipment removed last week due to the threat of new slides and for safety of highway workers. Caltrans geologists and engineers plan to assess it further when this area stabilizes.
- There is no estimate when this section of State Route 1, approximately nine miles north of the San Luis Obispo/Monterey County line will re-open.

Pfeiffer Bridge Incident, Monterey County

California Highway Patrol (CHP) and Caltrans had a hard closure on the Pfeiffer Bridge on HWY 1 at mile marker 45.52 (SB Sycamore Canyon and the Bridge) due to a crack in the bridge. The bridge has been demolished so the road is closed and estimates for some access from the north is late September 2017.

- Backup air medical transport plans have been developed for medical emergencies through Cal OES Law Enforcement Branch.
- All businesses north of the Pfeiffer Canyon Bridge closure are open to the public.

SITUATION SUMMARY

2017 Statewide Winter Storms

Cal OES Inland Region

River Forecast - The following rivers are forecast to meet or exceed Monitor Stage:

- Placer County: Truckee River at Truckee
- Alpine County: East Fork Carson River at Markleeville, West Fork Carson River at Woodfords

Please see link for River Forecast Guidance - <http://www.cnrfc.noaa.gov/>

Cal OES Southern Region

River Forecast - The following river is forecast to meet or exceed Flood stage:

Mono County:

- West Walker River at US 395 Below Little Walker is forecast to exceed flood stage at 6.2 feet the morning of 06/04/17.
 - Potential Impacts: Some minor flooding of lowlands, pastures, and rural roads.

Please see link for River Forecast Guidance - <http://www.cnrfc.noaa.gov/>

WEATHER SYNOPSIS BY REGION

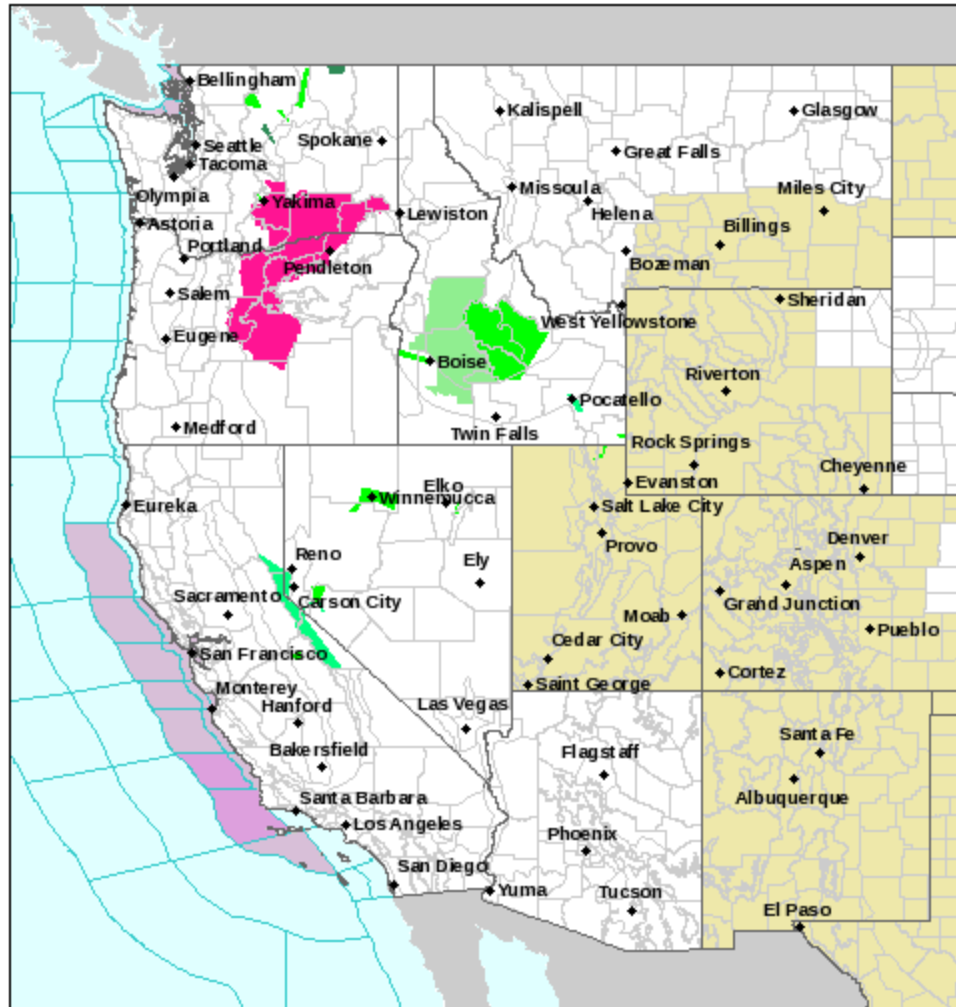

NORTHERN CALIFORNIA

The high pressure ridge that had been over Northern California in recent days has moved off to the east and a Gulf of Alaska low pressure system will be the main influence on Northern California's weather through mid-week. Clouds will increase from the northwest today and a few showers are possible in the northwest mountains. Isolated showers or thunderstorms are also possible in the Sierra south of Highway 50. The area of clouds and showers moving in from the northwest will spread east and south overnight and early Wednesday, remaining north of a line from Arcata-Chico-Placerville. Most areas will see less than 0.25 inches, but some higher elevations may see 0.25-0.50 inches. Winds will increase out of the S-W today, with afternoon gusts reaching 30-40 mph in higher wind-prone areas. S-W winds will be slightly lighter on Wednesday and Thursday. Temperatures will be near normal today and 4-8 degrees below normal on Wednesday, then near normal again on Thursday. The low will move off to the east on Thursday and a relatively flat upper level flow will persist for a few days, producing mild conditions with light winds. Another low pressure trough will move in Sunday and produce cooler than normal temperatures and gusty winds for a few days. Clouds along with a few showers and thunderstorms will be more common in the north.

SOUTHERN CALIFORNIA

An exhibition of typical late May/early June weather is anticipated over the course of the next few days. Expect extensive marine layer coverage along with warm temperatures and hazy sunshine further inland with only minor day-to-day variations of temperature, wind and relative humidity (RH) through the end of the week. The marine layer is over 2,000 feet deep this morning, resulting in widespread stratus along the coast and many interior valleys. These areas will see slow clearing later this morning with temperatures near to a bit below normal for this time of year. But further inland, temperatures will be 5-10 degrees above normal again this afternoon. Highs will reach the mid 90s across the San Joaquin Valley and lower Sierra Foothills as well as areas in and near the Antelope Valley. Minimum RH may fall into the 12-18% range in these areas for up to 6 hours this afternoon and evening. Wednesday, a trough passing through the northern half of the state will result in slightly cooler temperatures across the entire district. Isolated showers and thunderstorms will be possible in the Sierras during the afternoon Wednesday afternoon, but otherwise, expect little in the way of cloudiness in the high country this week. Drizzle or very light rain may occur in Monterey County Wednesday afternoon as well. Along the central coast, expect northwest winds of 15-25 mph with higher gusts to develop Wednesday afternoon and evening. Similar southwesterly winds will develop Wednesday afternoon in and near the desert. Onshore flow will keep many inland valleys of Southern California from seeing much sunshine on Wednesday. Thursday and Friday, a weak ridge will bring slightly warmer and less breezy weather to the region. Less marine layer coverage will allow for highs to reach the lower to mid 90s in the valleys again Friday afternoon with minimum RH in the teens once again. Cooler weather along with a more extensive marine layer will arrive this weekend.
